The visit to the new Infineon Technologies building offers participants a real-life example of how energy efficiency, renewable energy, and sustainability can be integrated into a modern office development. The project incorporates innovative technologies such as a gas-free energy concept, a geoexchange system for heating and cooling, rooftop photovoltaic panels, and heat recovery units, while targeting the highest sustainability standards through LEED Platinum certification. These solutions contribute to reducing the building's carbon footprint, improving energy performance, and supporting ambitious ESG objectives. The site visit will provide valuable insights into the practical application of technologies relevant for Nearly Zero-Energy Buildings (NZEBs) and future-ready building projects in Romania.
